

Anchor Industries applies its socketing and splicing expertise

Supplier of marine and offshore mooring as well as lifting and rigging equipment in Southern Africa, Anchor Industries has recently completed a socketing and splicing project at their 5000 m² workshop in Cape Town, intended for a ship in Richards Bay.

The project included the manufacturing of 77mm pennant wires and 96mm mooring grommets.

“We constantly train and equip our employees with skills that enable us to be competitive in the offshore and marine industry and conduct the jobs according to national and international specifications that are required in the industry. By doing so, we are able to source and provide a maximum of products and offer excellent services requested by our clients in the marine and offshore oil industry,” says Dale Hutcheson, Managing Director of Anchor Industries.

All Anchor Industries’ employees have undergone a socketing course which detailed correct procedures and techniques for Resin Capping to the American Petroleum Institution (API) specifications. Also, the employees have been trained in mechanical splicing entailing correct measuring, splicing and pressing techniques.

Supplying equipment and showing the company’s services in spooling and socketing, Anchor Industries has the ability to manufacture mooring grommets and to stock mooring ropes up to the size of 120mm, which is the largest size available in stock in Cape Town. Fully trained personnel provide an on-site socketing service for all diameter steel wire ropes.

In line with their continued emphasis on quality and reliability, Anchor Industries has formed partnerships and alliances with major equipment suppliers worldwide. All Anchor Industries equipment is available for rental, sales and testing.
